DELPHINIUMS A SPECIALTY

The marvelous "WREXHAM" strain which so resembles the hollyhock, was originated in Wales, and first shown at the London Exhibition in 1921, where they were greatly admired for their beauty.

This strain has broad based tall spikes with large individual flower of a rich deep shade, which is the ambition of experienced growers.

After no end of effort on my part, say nothing of the expense, I was able to obtain the seed for my start of this famous strain from the originator, Mr. Watkins Samuel. My success has been so phenomenal that I am now able to supply my customers with this choice seed at the very reasonable price of \$1.00 per packet.

I can supply seed of the "HOODACRES" strain, which is a very fine and reliable variety, in liberal size packages at \$1.00 each.

The F. C. BURN'S strain is another fine variety, which has a beautiful silvery sheen, and can not be excelled for decorative purposes, and is in great demand by florists. Liberal size packages \$1.00 each.

DELPHINIUM CULTURE

To insure the best success, seed should be sown in flats in the greenhouse as early as February 15th or March 1st, depending upon the climate, and when the plants have reached a height of 2½ or 3 inches, set out in the garden in rows 3 to 4 feet apart and about 2 feet apart in the row. Plant on well-drained ground and we recommend bonemeal ONLY as fertilizer.

When the early flowering is over the plants should be cut back to about 6 or 8 inches in height and a second crop will follow, keeping up the flowering season until early frosts appear.
